SUMMARY

Computer Science graduate specializing in AI & ML with experience in Robotics ,Data Analytics, Automation, and Full-Stack Development. Skilled in Python, SQL, and data-driven problem solving, with hands-on experience in industrial data operations, AI applications, and technology-driven projects.

EDUCATION

Global Academy of Technology, Bengaluru

2022 – 2026

Bachelor of Engineering (CSE – AIML)

TECHNICAL SKILLS

Technical Skills : Linux , Sql , SSH ,Data Analysis , Python , Html , Css , Machine Learning , WIFI troubleshooting

Industrial & Automation : UR , EGOP , SUMI , Web Scraping , LLM , SSH&Remote access

Backend Development : API integration , Full Stack , Machine Learning

Robotics / Hardware - Robot Hardware Troubleshooting ,Device Configuration & Maintenance ,Robotics System Troubleshooting ,Sensor / Device Connectivity ,Firmware / Software Updates , Hardware–Software Integration , Device Deployment & Setup

PROFESSIONAL EXPERIENCE

Codec Technologies Pvt. Ltd , Electric vehicles (EV) Technology Intern

Sep 2025 – Oct 2025

- Developed a Python-based Electric Vehicle Battery Management System (BMS) simulation that modeled and monitored critical battery parameters including State of Charge (SOC), State of Health (SOH), voltage, temperature, power output, and protection flags—using NumPy and Pandas to replicate real-world EV battery behavior and performance conditions.

•

Take IT Smart , Data science Intern

Feb 2026 – Jun 2026

- Designed data analytics dashboards using SQL and Power BI to monitor key performance indicators, automate reporting workflows, and convert complex datasets into meaningful insights that supported operational and business decision-making.
- Built a transformer-based Multi-Modal AI platform leveraging GPT-2, Vision Transformer (ViT), and Whisper models to analyze text, images, and audio data, demonstrating the practical application of Artificial Intelligence, Machine Learning, and advanced analytics for intelligent data processing and automation.

Instawork Robotics , Technics Engineer & DC&DA Associate

May 2026

- Built and maintained high-quality datasets by integrating web-scraped information with data extracted from PICO and SUMI devices, improving data reliability for AI model training, robotics applications, and analytical reporting and was part of testing also.
- Promoted to Technical Engineer in recognition of strong performance and technical capabilities. Currently responsible for the Deployment , maintenance, troubleshooting, and operational readiness of SUMI, EGOP, UR Robots , and YAM robots, ensuring reliable device performance and smooth project operations.

PROJECTS

Smart Ad Recommendation System : Created a content-based filtering recommendation platform using ML techniques. Tech stack: Python , Flask, Django, HTML, CSS, JavaScript ,SQL ,Excel.

Predictive Maintenance of Aircraft Engine Failure : Designed a predictive model to estimate the Remaining Useful Life (RUL) of aircraft engines using machine learning algorithms. Utilized Python for data processing and model building to enable early fault detection and improve maintenance planning .Used NASA simulation data for the dataset.

Blood Bank Donation System : Developed a secure website to manage blood donation and availability. • Implemented Firewall-Realtime database and Flask framework with Python backend.

PUBLICATIONS

Research Author – IJAMRS, Vol. 5, Issue 4 | Global Academy of Technology

Jul–Aug 2025

- Conducted research on Predictive Maintenance of Aircraft Engine Failure and authored a peer-reviewed publication, contributing to academic insights in sensor-based technologies and interdisciplinary engineering
